ATLAS (Accessing Telehealth through Local Area Stations) makes it easier for Veterans to access care through the U.S. Department of Veterans Affairs by establishing convenient locations for you to receive VA care, reducing obstacles such as long travel times to appointments and poor internet connectivity at home.

As part of ATLAS, VA has teamed up with public and private organizations to offer comfortable, private spaces at select locations for you to have video appointments with your VA providers.

Video Telehealth Services at ATLAS Sites

- ATLAS sites offer you a **private appointment room** to virtually meet with your VA providers.
- Using **VA Video Connect**, VA’s secure videoconferencing software, you can connect with your providers through real-time video.
- Each site is equipped with all the technology you need for your appointment. This includes **internet connectivity and a computer with video capabilities**. You do not need to bring a personal device.
- An **on-site attendant** is available at ATLAS sites to guide you through the process of connecting with your VA provider.
- **Clinical service** offerings at ATLAS sites are designated by the supporting VA Medical Center(s) and may include primary care, mental health, and specialty services.
- Veterans enrolled for care at a VA facility associated with an ATLAS site are **eligible to participate**.
- Talk with your provider to see if ATLAS might be an option for your health care.
